The Indian youth is accused of being impatient, indisciplined, disrespectful to the elders and irresponsible towards society and authority. It was felt that to curb these tendencies the youth required to be motivated in nation-building activities and made responsive to the social concerns.

For this purpose, National Service Scheme (NSS) was introduced in 1969. Its main aim was to involve the students of the colleges and +2 level on voluntary and selective basis in programmes of social services and developmental activities. Gradually it was adopted by all the states and union territories. Today it covers more than 5000 colleges all over the country. Under this scheme, rural and slum reconstruction, repair of roads, school buildings, ponds, tanks, plantation of trees, environment protection, health and family planning and education of adults and women are undertaken. The NSS students aid local authorities in implementing various relief and rehabilitation schemes. In the times of natural calamities like famines, floods, droughts, epidemics and earthquakes volunteers helped by NSS students play a very positive and constructive role. It instills in them the spirit of social service and the sense of responsibility.

The tribal youth are given vocational training under a special scheme to enable them to become self-employed. Then, there are youth hostels set up all over the country to provide cheap accommodation to the youth to inspire them into undertaking educational tours and excursions to visit the cultural and historic sites to revisit our glorious past. 446 Nehru Yuvak Kendras strewn around the country provide vocational training to non-student rural youth and improve their personality. 'Bharat Scouts and Guides' and 'All India Boy Scouts Association' are teaching Indian youth the importance of loyalty and goodwill for others under International scouting and guiding movement.

**UNIT - I (Introduction to Communication)**

**I. A) Answer any ONE of the following in about 250-300 words:**  
(10x1=10)

1. Write a note on LSRW skills with respect to technical communication.
2. Specify some of the barriers to effective communication in detail with examples.

**B) Read the following passage and answer the questions below:**

Once an inventor has discovered a use for a new technology, the next step is to persuade society to adopt it. Merely having a bigger, faster, more powerful device for doing something is no guarantee of ready acceptance. Innumerable such technologies were either not adopted at all or adopted only after prolonged resistance. Notorious examples include the U.S. Congress's rejection of funds to develop a supersonic transport in 1971, the world's continued rejection of an efficiently designed typewriter keyboard, and Britain's long reluctance to adopt electric lighting. What is it that promotes an invention's acceptance by a society?

Let's begin by comparing the acceptability of different inventions within the same society. It turns out that at least four factors influence acceptance.

The first and most obvious factor is relative economic advantage compared with existing technology. While wheels are very useful in modern industrial societies, that has not been so in some other societies. Ancient Native Mexicans invented wheeled vehicles with axles for use as toys, but not for transport. That seems incredible to us, until we reflect that ancient Mexicans lacked domestic animals to hitch to their wheeled vehicles, which therefore offered no advantage over human porters.

A second consideration is social value and prestige, which can override economic benefit (or lack thereof). Millions of people today buy designer jeans for double the price of equally durable generic jeans—because the social cachet of the designer label counts for more than the extra cost. Similarly, Japan continues to use its horrendously cumbersome kanji writing system in preference to efficient alphabets or Japan's own efficient kana syllabary—because the prestige attached to kanji is so great.

Still another factor is compatibility with vested interests. This book, like probably every other typed document you have ever read, was typed with a QWERTY keyboard, named for the left-most six letters in its upper row. Unbelievable as it may now sound, that keyboard layout was designed in 1873 as a feat of anti-engineering. It employs a whole series of perverse tricks designed to force typists to type as slowly as possible, such as scattering the commonest letters over all keyboard rows and concentrating them on the left side (where right-handed people have to use their weaker hand). The reason behind all of those seemingly counterproductive features is that the typewriters of 1873 jammed if adjacent keys were struck in quick succession, so that manufacturers had to slow down typists. When improvements in typewriters eliminated the problem of jamming, trials in 1932 with an efficiently laid-out

Contd...2

## G 734 LA1.1

keyboard showed that it would let us double our typing speed and reduce our typing effort by 95 percent. But QWERTY keyboards were solidly entrenched by then. The vested interests of hundreds of millions of QWERTY typists, typing teachers, typewriter and computer salespeople, and manufacturers have crushed all moves toward keyboard efficiency for over 60-years.

While the story of the QWERTY keyboard may sound funny, many similar cases have involved much heavier economic consequences. Why does Japan now dominate the world market for transistorized electronic consumer products, to a degree that damages the United States's balance of payments with Japan, even though transistors were invented and patented in the United States? Because Sony bought transistor licensing rights from Western Electric at a time when the American electronics consumer industry was churning out vacuum tube models and reluctant to compete with its own products.

Why were British cities still using gas street lighting into the 1920s, long after U.S. and German cities had converted to electric street lighting? Because British municipal governments had invested heavily in gas lighting and placed regulatory obstacles in the way of the competing electric light companies.

The remaining consideration affecting acceptance of new technologies is the ease with which their advantages can be observed. In A.D. 1340, when firearms had not yet reached most of Europe, England's earl of Derby and earl of Salisbury happened to be present in Spain at the battle of Tarifa, where Arabs used cannons against the Spaniards. Impressed by what they saw, the earls introduced cannons to the English army, which adopted them enthusiastically and already used them against French soldiers at the battle of Crecy six years later.

**VII. Comprehension**

Le plaisir de lire s'est effondré partout dans le monde. Il ne s'agit pas d'une question pédagogique puisque cet effondrement est mondial. L'une des explications avancées, c'est que la lecture est concurrencée. Les jeunes passent de plus en plus de temps sur les réseaux sociaux, les jeux vidéo, etc. L'apparition des écrans ne date pas de 2000, mais l'offre de loisirs a beaucoup augmenté depuis ce temps. Le livre n'est plus le premier vecteur culturel. Il n'est qu'un média parmi d'autres. L'envie de lire explique 18% de la variation des performances scolaires. Si on regarde la différence entre le quart des élèves qui dit apprécier lire et le quart qui n'apprécie pas, on compte un écart de trois années scolaires ! Le fait d'aimer lire et le fait d'obtenir de bonnes performances sont liés. La lecture reste fondamentale pour réussir, elle est partout nécessaire.

Selon nos résultats, les grands lecteurs de fiction obtiennent les meilleurs résultats. Mais les élèves qui réussissent le mieux sont ceux qui utilisent différents types de lecture (BD, romans, journaux). Ceux qui ne sont focalisés que sur un seul type de lecture réussissent moins bien. Il y a aujourd'hui tellement d'alternatives à la lecture pour découvrir et comprendre le monde qu'une baisse de la lecture classique n'est pas forcément étonnante. Cela dit, les jeunes ne lisent pas forcément moins mais différemment. Ils lisent peut-être moins les grands auteurs mais d'avantage de petits articles et informations, ce qui n'est pas toujours valorisé. C'est tout le paradoxe, la lecture est partout aujourd'hui, même sur les écrans, mais cette lecture numérique est différente.
