XIII. Read the following passage and answer the questions set on it.

A European study revealed that 100% juices of fruit and vegetables are as effective as their whole fruit or vegetable counter parts in reducing risk factors related to certain diseases.

The conclusion is the result of a study designed to question traditional thinking that 100% juices play less significant role in reducing risk of both cancer and cardio-vascular diseases.

Juices are comparable in their ability to reduce risk vis-à-vis their whole fruit or vegetable counter parts. According to several researches in the united kingdom. The researchers analysed a variety of studies and that looked at risk reduction attributed to the effects of both fibre and anti-oxidants. As a result, they determined that the positive impact fruits and vegetables offered come not from just the fibre but also from the whole fruit and vegetables.

The researchers added that the positioning of fruit juices as being nutritionally inferior to whole fruits and vegetables in relationship to chronic disease development is "unjustified" and that the policies which suggest otherwise about fruit and vegetables juices, should be re-examined.

1. Give a suitable title to the passage (1)
2. A systematic study of a subject is _____ (1)
(choose a right word from the passage)
3. What are the advantages of drinking fruit and vegetable juices? (2)

(Introduction to Communication)

**A. Answer any TWO following questions in about 200-250 words:
(10x2=20)**

1. Write a note on LSRW skills.
2. Explain the various stages of communication.
3. Mention some common differences between general and technical communication.

**B. Read the following passage and answer the question below.
(10x1=10)**

Since the first identification of autism in 1943, a lot of research has been carried out to study this condition from different perspectives. Now we know much more about autism but still there are a lot of 'whys' we cannot answer yet. One of the obstacles on the way to answer these "why they behave the way they do" questions, in my opinion, is our lack/ impairment of imagination. Yes, many of us might be considered impaired in this aspect as we interpret the 'autistic behaviours' from our (non-autistic) perspective. For example, we consider the so-called self-stimulatory behaviours (flapping hands, banging head, twirling, spinning rocking etc) meaningless. Yes; they do look meaningless for us. But are they meaningless for a child who tries, for examples, to reduce pain caused by hypersensitivity to certain, perceive and interpret the world around us is the only way to do it?

Despite the fact that many people with autism have tried to communicate their views and insights, these attempts have mostly passed without much professional notice, one of the reasons being their views and insights are unconventional to the majority of people (so-called normal people). However different does not mean abnormal or defective and normalcy is a very relative term, as the norm is often applied to the performance of majority, and it is more justifiable to term it typical. To avoid having to use the term normal autistic people at Autism Network International (ANI, founded by Jim Sinclair and Donna Williams in 1992) have introduced a new term neurologically typical (NT) to describe non-autistic people.

Here I deliberately use the term autistic people rather than people with autism because autism is not something that is just attached to them. I am aware of the people first, then disability approach. However without autism they would be different people as being autistic means being different. If people with autism themselves prefer to name themselves autistic, why should we be so shy to call them that? Just to show them our respect? But there are other ways to do it. Why should we be ashamed to call them autistic? Autism is not something to be ashamed of. To draw a parallel, we should call Russian people as "people from Russia" to show that we respect them despite the fact that under the communist party regime the policy of that country was to put it mildly, incorrect.

Contd...2

Our approach should be to listen to autistic individuals who are willing to communicate and explain how they experience the world and not to assume that only our views are right because we are specialists/parents. It is the same as if I said to you, "Sorry, but you speak English with an accent. Let me teach you English pronunciation. It doesn't matter that I am Russian. I am a linguist so I know better than you how to speak your language properly". Let us listen to the opinion of autistic individuals themselves, as for them autism is a way of being. It is pervasive, it colours every experience, every sensation, perception, thought, emotion, in short every aspect of existence. They do not respond in a way we expect them to, because they have different systems of perception and communication. Bob Morris calls it a different set of SPATS – senses, perceptions, Abilities and thinking systems, that are not in the same spectral range as NT individuals of course, it is very difficult to communicate with someone who uses a different language (and autistic people are 'foreigners' in any culture). But it is equally wrong to use non-autistic methods to teach and treat autistic children. It is sure to fail and sometimes even to damage their life. We have to give up our conventional non-autistic assumptions and let them teach us of their communication systems in order to build bridges between the two worlds. So, where shall we start? I like the advice by Donna Williams, a high functioning woman with autism: "If you have a camel which is finding it hard to walk under the weight of all the straws on its back, the easiest way to make it is easier for the camel to walk as to take as many straws off its back as possible"... and not to train. "The camel to walk or appear to walk whilst carrying the straws. To take the straws off the camels back, you have to do two things. One is identify them and second is find out how to remove them".

If we can understand the causes of certain behaviours we can accept these behaviours. If we know what to look for, it will be easier for us to understand the persons problems and abilities and to find appropriate methods to identify and remove the straws. Moreover understanding of the way autistic people experience the world will bring respect to people with autism in their attempts to survive and live a productive life in the outside world instead of unacceptance often exhibited by the general public.

UNIT - IV

(Vocabulary and Comprehension)

IX Read the following passage and answer all questions: (1x5=5)

It took three long years for my coming into existence, after the idea of new currency was conceived. I was first conceived and named on 1st January 1999, when eleven European countries decided to have a new money form i.e Euro. My value was determined as per the conversion rate fixed by these countries in terms of their own currencies. On 1st January 2002, I was circulated as currency notes when twelve countries adopted me as their currency. Some countries opposed the idea of using me and initially refused to accept me. But now almost all European countries have accepted me as a valid currency. My broth Dollar who is in America, my brother Lira residing in Italy and my sister Sterling was quite jealous of me but soon they accepted my existence and started respecting me. I now enjoy a place of pride among all the currencies in the world and almost everyone accepts me freely.

1. When did Euro come into existence?

Contd...4

2. Euro was accepted without opposition. True/False.
3. Bring out the sibling rivalry in the family of Euro.

- E. Read the following passage and answer the questions. Answer in a word/phrase/sentence for 1 mark questions and in 2 or 3 sentences for 2 marks questions.** (6)

The culture of nuclear families is in fashion. Parents are often heard complaining about the difficulties in bringing up children these days. Too much of freedom in demand, too much independence, overnight parties, excessive extravagance, splurging pocket money, no time for studies and family, all this is a common cry of such families. Aren't parents, themselves, responsible for this pitiful state? The basic need of a growing youth is the family, love, attention and bonding along with moral values. One should not forget that charity begins at home.

Only the reasonable demands need to be fulfilled, as there are too many expenses to be met and too many social obligations to be taken care of by the parents. Earlier there never existed the concept of old-age homes. There was a deep respect for the family elders, and love, care and concern for the youngsters. Even the minor family differences were solved amicably in the joint families.

- Mention any two major common concerns of a nuclear family. (1)
- Who, according to the passage, is responsible for them? (1)
- Explain the expression 'Charity begins at home'. (1)
- Find out the word in the passage which means The pleasant and friendly manner in which a difficult situation is dealt with. (1)
- Describe the atmosphere in joint families. (2)

14. Scimitar proves the accuracy of its ledgers by preparing monthly control accounts. At 1st September the following balances existed in the company's accounting records, and the control accounts agreed:

	Debit	Credit
Accounts receivable ledger totals	\$ 188,360	\$ 2,140
Accounts payable ledger totals	120	89,410

The following are the totals of transactions which took place during September, as extracted from the company's records:

	\$
Credit sales	101,260
Credit purchases	68,420
Sales returns	9,160
Purchases returns	4,280
Cash received from customers	91,270
Cash paid to suppliers	71,840
Cash discounts allowed	1,430
Cash discounts received	880
Irrecoverable debts written off	460
Refunds to customers	300
Contra settlements	480

At 30 September the balances in the ledgers, as extracted, totaled:

	Debit	Credit
Accounts receivable ledger balances	\$ To be ascertained	\$ 2,680
Accounts payable ledger balances	90	To be ascertained

An initial attempt to balance the two ledgers showed that neither of them agreed with their control accounts. The differences were found to be due to the following:

- (i) A credit balance of \$680 had been omitted when listing the accounts receivable ledger balances;
- (ii) A contra settlement of \$500 had not been included in the totals of transactions prepared for the control accounts;
- (iii) A new employee had mistakenly entered five sales invoices into the purchases day book as if they had been purchase invoices and entered the amounts to new accounts payable ledger accounts. The total of these invoices was \$1,360;
- (iv) A \$20 cash refund to a customer was made that has not been included in the summary of transactions given above. The \$20 was entered to the accounts receivable ledger as if it had been a cash receipt from the customer. This resulted in a \$40 credit balance on the account, which was still outstanding at 30 September.

When these errors had been corrected both control accounts agreed with the personal ledgers.

Required:

Prepare the accounts receivable ledger and accounts payable ledger control (total) accounts for the month of September AFTER these errors had been corrected, and hence ascertain the missing totals of the ledger balances as indicated above (debit balances in accounts receivable ledger and credit balances in accounts payable ledger).

(Introduction to Communication)

A. Answer any Two following questions in about 200-250 words:

(10x2=20)

1. Describe in detail various channels of communication.
2. What is communication? Write a brief note on technical communication.
3. Mention some of the barriers for effective communication.

B. Read the following passage and answer the question below.

(10x1=10)

Now this is a subject on which I flatter myself I Really am 'au fair'. The gentleman who, when I was young, bathed me at wisdom's font for nine guineas, a term-no-extras-used to say he never knew a boy could do less work in more time; and I remember my poor grandmother once incidentally observing, in the course of an instruction upon the use of the Prayerbook, that it was highly improbable that I should ever do much that I ought not to do, but that she felt convinced beyond a doubt that I should leave undone pretty well everything that I ought to do.

I am afraid I have somewhat believed half the dear old lady's prophecy. Heaven help me. I have done a good many things that I ought not to have done, inspite of my laziness. But I have fully confirmed the accuracy of her judgement so far as neglecting much that I ought not to have neglected is concerned. Idling always has been strong point. I take no credit to myself in the matter-it is a gift. Few possess it. There are plenty of lazy people and plenty of slow-coaches, but a genuine idler is a rarity. He is not a man who slouches about with his hands in his pockets. On the contrary, his most startling characteristic is that he is always intensely busy. It is impossible to enjoy idling thoroughly unless one has plenty of work to do. There is no fun in doing nothing when you have nothing to do. Wasting time is merely an occupation then and a most exhausting one. Idleness, like kisses, to be sweet must be stolen.

Many years ago, when I was a young man taken very ill-I never could see myself that much was the matter with me, expect that I had a beastly cold. But I suppose it was something very serious, for the doctor said that I ought to have come to him a month before, and that if it (whatever it was) had gone on for another week he would not have answered for the consequences. It is an extraordinary thing, but I never knew a doctor called into any case yet but what it transpired that another day's delay would have rendered cure hopeless. Our medical guide, philosopher and friend is like the hero in a melodrama - he always comes upon the scene just, in the nick of time. It is providence, that is what it is.

- b) Calculate mean wage of the following

Weekly wage	No of workers
0-2000	30
2000-4000	70
4000-6000	100
6000-8000	60
8000-10000	40

16. a) List out the properties of Arithmetic mean and standard deviation.

(5 Marks)

- b) Solve the linear simultaneous equation using algebraic method

(5 Marks)

$$2x + 3y = 20$$

$$3x - y = 10$$

- c) A dietician wishes to mix two types of foods in such a way that vitamin contents of the mixture contain at least 8 units of vitamin A and 10 units of vitamin C.

Food 'X' contains 2 units of vitamin A and 1 unit of vitamin C. Food 'Y' contains 1 unit of vitamin A and 2 units of vitamin C. It costs ₹ 50 per kg to purchase Food 'A' and ₹ 70 per kg to purchase Food 'Y'. Formulate this problem and show

The feasible region on a graph.
